PROFESSIONAL SUMMARY

Senior data professional with 15+ years in technology and the last 5 in data at KTO Group, an online betting platform, where I was the first hire on the data team and grew from Data Analyst to Analytics Engineer to Data Lead. I combine analysis, reporting, and analytics engineering: I replaced untrusted legacy dashboards with a single source of truth and 30+ QuickSight dashboards used by 100+ people across the company, and later scaled the data platform from ~1M to ~50M transactions per day, with critical data refreshed every 5–15 minutes. Hands-on in SQL and data modeling, with a track record of turning stakeholder questions into metrics people trust. AI-native: I use Claude daily for SQL, code, and documentation. Advanced English.

SKILLS

Modeling & Analysis: SQL (window functions, complex joins, query performance on Redshift), data modeling (layered/medallion architecture, curated datasets), KPI definition with stakeholders, ad hoc and deep-dive analysis; Python for analysis (working knowledge)
Reporting: AWS QuickSight (30+ dashboards), Qlikview, Tableau (basic); single source of truth for KPIs, self-serve reporting
Analytics Engineering: Amazon Redshift, AWS Glue, PySpark, S3, AWS DMS (CDC); data quality, deduplication and integrity checks; Apache Airflow (working knowledge), dbt (basic)
Ways of Working & AI: Stakeholder partnership; Agile/Scrum, Jira, Git; Claude (Anthropic) used daily

PROFESSIONAL EXPERIENCE

Data Lead — KTO Group *(09/2024 – Present)*

- Lead a 4-person Data Engineering & Architecture team, with extended support to BI/Analytics, while staying hands-on in SQL and PySpark.
- Data focal point in KTO's federal regulatory process: gathered evidence for external audits and built the data extraction for the government's SIGAP integration, delivered on deadline. KTO was among the first 15 companies approved to operate in Brazil without reservations.
- Implemented automated data quality checks that alert the team on non-conformities and, where possible, apply the correction automatically.
- Drive data governance standards and use Claude daily to speed up SQL, code, and documentation.

Analytics Engineer — KTO Group *(08/2023 – 08/2024)*

- Designed a CDC-based data platform (AWS DMS, Glue/PySpark, Redshift, S3, Airflow) with data quality, deduplication, and integrity layers, scaling from ~1M to ~50M transactions per day.
- Cut data latency from daily to every 5–15 minutes for critical domains (casino, sportsbook, registrations, transactions), enabling fraud, abuse, and platform-issue alerts.
- Delivered the curated datasets that power reporting and analysis across the company.

Data Analyst — KTO Group *(08/2021 – 07/2023)*

- First member of the data team. Replaced legacy Power BI dashboards the business didn't trust (wrong KPIs, little history) by defining KPI rules with stakeholders and building a single source of truth for all analyses.
- Built 30+ QuickSight dashboards in 2 years for Payments, Casino, Sportsbook, Marketing, and Management, used by 100+ people, plus ad hoc analyses. Data that used to take hours, or wasn't accessible at all, became available on demand.
- Automated affiliate commission calculation in a dashboard, replacing manual spreadsheets.

Systems Analyst — Benoit Eletrodomésticos (retail) *(10/2017 – 08/2021)*

- Implemented a credit analysis desk for 250+ stores, with requests routed to a queue and the customer's full history on one screen, cutting average analysis time from 15 to under 5 minutes.
- Led the data migration between legacy systems (Talend) and evaluated BI tools for the company.

Senior Qlikview Developer — HBSIS Soluções em TI *(11/2016 – 09/2017)*

- Built and maintained Qlikview dashboards for Ambev, gathering requirements directly with the client.

Software Analyst/Developer — Idealogic Software *(12/2010 – 10/2016)*

- On DuPont Pioneer's BI team for 3 years (users in Brazil, Argentina, Chile, Mexico, and Canada), replaced SAP-extract spreadsheets with an auto-refreshing Qlikview logistics dashboard, saving at least one employee shift per week, and created a truck load-occupancy KPI that surfaced distribution optimizations.
- Delivered ETL projects with Talend across SQL Server, MySQL, PostgreSQL, Oracle, and Firebird, and developed Java web systems.

Earlier experience: technical support and electrical maintenance at Imply Tecnologia Eletrônica (2009–2010) and Philip Morris Brasil (2008, internship).

EDUCATION & LANGUAGES

Bachelor's Degree in Computer Science — Universidade de Santa Cruz do Sul (UNISC), 2016
Technical Degree in Mechatronics — EEP SENAI Carlos Tannhauser, 2008
Portuguese (native) | English (advanced) | Spanish (basic)
