About

Brazilian professional with 5+ years of experience in Data Science, ML Engineering, and MLOps. Experienced in architecting and implementing cloud-based machine learning operations solutions that enable end-to-end management of the machine learning model lifecycle.

Experience

- **MLOps Engineer** Oct 2023 - Oct 2025
  GCB Investimentos *São Paulo, Brazil*

  GCB Investimentos is a Brazilian financial markets holding company with 16+ years of experience, 200,000+ clients served, and over R$3B in transaction volume.

  I was responsible for transitioning existing ML engineering capabilities into an ML platform approach, delivering reusable services that enabled scalable deployment, governance, and model lifecycle operations across the group's companies.

  Key Contributions:

  - Led the technical development of MLOps solutions with a strong focus on reliability, collaborating with cross-functional teams to design, implement, and optimize processes that accelerate the development, deployment, monitoring, and governance of machine learning models across companies in the group.
  - Architect and implemented end-to-end solutions using AWS services, SageMaker, and in-house developed tools, streamlining the entire ML lifecycle.
  - Built and managed the ML platform infrastructure using Infrastructure as Code (IaC) with AWS, GitHub Actions, and Terraform.
  - Implemented a Feature Store for consistent feature management.
  - Implemented a Model Registry as the centralized lifecycle manager, applying strategies for production variants, shadow variants, and A/B testing to improve governance, support efficient model versioning, and enable auto retraining.
  - Developed a custom ML Deployment Service to orchestrate model rollouts and support real-time, serverless, and batch deployment strategies.
  - Built a custom Ground Truth Service for data labeling, tailored to the organization's business and data requirements.
  - Designed and deployed a Model Performance Monitoring System to track evaluation metrics and enable proactive governance.
  - Implemented a Data Drift Detection Service to monitor feature distribution shifts over time.

- **Machine Learning Engineer** Mar 2025 - Oct 2025
  PeerBR (Integrated into GCB Investimentos) *São Paulo, Brazil*

  PeerBR was a Brazilian tokenized private credit and investment crowdfunding platform connecting investors with SME receivables and private debt opportunities. As of 2025, the platform has served 200k+ clients, processed 400k+ transactions, originated 130k+ assets, and facilitated R$771M+ in crowdfunding volume.

  I was responsible for implementing the company's first machine learning models, focused on batch-based investment recommendations and qualified lead generation.

- **Machine Learning Engineer** Mar 2023 - Oct 2025
  Adiante Recebíveis *São Paulo, Brazil*

  Adiante is an SME-focused fintech that provides fast invoice financing, with credit analysis in 15 seconds, R$900M+ in receivables financed, 440k+ invoices processed, and 150k+ registered users across Brazil.

  I was responsible for building and leading the company's ML Engineering function, taking the first ML solutions from prototype to production, establishing core engineering standards and tooling, and scaling model adoption from early pilots to sustained org-wide use.

  Key Contributions:

- Drove alignment between technical and product teams across the ML workflow, ensuring robust model validation, deployment, and production readiness.
- Managed the entire ML model lifecycle, including training, retraining, deployment, and monitoring.
- Implemented CI/CD pipelines to operationalize experimentation and promote validated models into production.
- Built automated feature, training/retraining, deployment, and inference pipelines to accelerate model delivery and enable retraining as needed.
- Managed code, data, pipelines, and models, ensuring reproducibility, versioning, and governance.
- Designed and implemented ML systems aligned with business needs, ensuring scalability and reliability.
- Served machine learning models on multiple architectures, including real-time, serverless, and batch pipelines.
- Implemented end-to-end test suites for the ML systems, validating behaviors and integration across components to enable safe, reliable releases.
- Implemented functional and operational monitoring across APIs, training pipelines, inference pipelines, and model endpoints.

- **Data Scientist** Sep 2022 - Mar 2023
  Adiante Recebíveis [Credit Fintech of GCB Investimentos] *São Paulo, Brazil*
  - Developed machine learning models for credit applications, from feature engineering to production deployment.

- **Data Scientist** Ago 2021 - Sep 2022
  Comunidade DS *São Paulo, Brazil*

  Comunidade DS is a data science school and consulting firm focused on real-world, project-based learning. I developed and implemented machine learning models for different business use cases, applying data science techniques to solve practical problems in realistic project environments.

- **Operational Analyst** Feb 2014 - Apr 2020
  Neoenergia *Atibaia, São Paulo, Brazil*

  Worked directly and through third-party contractors, focusing on data analysis for voltage meters, management of external contracts, and tracking and reporting of engineering projects.

Education

- **Institute of Management and Information Technology (IGTI)** Minas Gerais, Brazil
  MBA in Machine Learning *2022 – 2023*
- **City University of São Paulo (UNICID)** São Paulo, Brazil
  Associate's degree in Financial Management *2016 – 2018*

Communities & Memberships

- **Tech Leads Club**: Private community for Senior+ software engineers and tech leads, focused on leadership, architecture, high-level engineering practices, and AI-assisted development.
- **ScoraS Academy**: Private community focused on AI engineering, AI Agents, and production-grade AI systems.
- **Jornada de Dados**: Private community focused on data engineering, data platforms, and scalable data pipelines.
- **MLOps Community**: Open community focused on MLOps practices, tooling, and real-world solutions.
- **Feature Store for ML**: Open community focused on feature stores, feature management, and production ML data workflows.

Languages

- **Brazilian Portuguese**: Native
- **English**: Professional working proficiency
