Profile

Versatile and highly technical professional, with innate ability to analyze and solve problems, great affinity with programming logic and excellent self-taught ability, resulting in the development of assertive solutions for unprecedented problems.

Driven by complex challenges involving multiple competencies, especially in automations and integrations.

Being someone whose main characteristic is the nonconformity with the status quo, the act of looking for ever better and more effective ways to accomplish tasks is as much a profession as a hobby.

Strong experience with python-based multi-threaded and async application/microservice development, from customer storytelling to application deployment, going all the way through interfacing with owners/managers/customers, with a high degree of care and sense of ownership for each developed project.

Solid experience in Linux server administration and complex troubleshooting of networks, systems and applications, identifying root causes and appropriate solutions.

Languages

- Portuguese: Native
- English: Fluent (C1)

Education

- Computer Network Technologist – SENAC – Jan/2014 to Jun/2016
- Computer Network Technician – SENAI – Jan/2010 to Dec/2011

Professional Experience

Senior Python Developer at Thoughtful AI - Aug/2025 to Apr/2026

Developed a backend automation product from scratch in the healthcare domain, focused on medical claims processing and operational workflow optimization. Built and maintained a Python-based application with FastAPI and asynchronous processing, responsible for integrating external and internal services, exposing API endpoints, managing token-based access, and supporting reliable handling of business-critical workflows.

Responsible for designing scalable automation flows, implementing integrations with databases and third-party APIs, and incorporating LLM calls for data processing and decision-support features. Worked with PostgreSQL for data persistence, improved system robustness through testing and maintainable architecture, and helped deliver a full product aligned with business and operational needs.

Technologies: Python, FastAPI, Asyncio, PostgreSQL, LLM integrations, REST APIs

---

Senior Python Developer at Arionkoder - Aug/2024 to Aug/2025

Joined an existing project with a product focused on tracking reputation data for companies. This product consists of a web frontend for presenting all sorts of reports and insights to the customers, as well as a backend built in FastAPI with both REST and GraphQL endpoints, using MongoDB. Responsible for adding new features using FastAPI, dealing with relational and NoSQL databases, JWT auth.

Proactively took ownership of a new project, building a POC application for internal file management and validation. This application consists of REST API endpoints for uploading, downloading, managing the files, using SQS/lambdas, to make it scalable and reliable, asynchronously processing various time-consuming tasks with the files.

Joined a POC for building an application for PDF files management and data extraction/analysis, featuring a frontend built in react and a backend built in FastAPI, powered by LLM calls for data extraction/analysis. Successfully delivered the application effectively adding huge value to the customer's business.

Technologies: Python, FastAPI, LLM, SQLAlchemy, PostgreSQL, MongoDB, GraphQL, SQS, Lambda

---

Senior Python Developer at Full Potential Solutions - Feb/2024 to Jul/2024

Worked on the backend development of a solution that leverages generative AI to provide data and insights about contact media (chat, email, audio).

Responsible for refactoring the existing codebase using asynchronous Python programming to make it more reusable, extensible and robust, while adding new features without breaking existing functionalities.

Leveraged AWS Step Functions and message queues to orchestrate processes, and PostgreSQL for data management. Collaborated with web frontend teams to ensure seamless and efficient integration of new features, always aligned with business needs and user objectives.

Improved system reliability by creating unit and integration tests.

Technologies: Python, Asyncio, PostgreSQL, AWS Step Functions, RabbitMQ

Senior Python Developer at Taller Technologies - Jan/2022 to Dec/2023

Worked with international teams to build robust REST APIs and microservices for systems integrations and automation, using Python, NoSQL, FastAPI, message queues and containers for backend development. Created Terraform modules for deploying IaC, mainly onto Azure.

Collaborated closely with cross-functional teams to design and implement API integrations, improving system interoperability, as well as to ensure codebase through versioning and reviews using Git, to ensure high-quality software production.

Regularly communicated with stakeholders, ensuring that software solutions were aligned with business objectives and users needs.

Technologies: Python, FastAPI, Asyncio, aiohttp, MongoDB, Celery, RabbitMQ, Redis, Terraform, Docker

---

Senior Python Developer at Mutant - May/2017 to Jan/2022

Through my own proactive efforts, during my time as Infrastructure Analyst (IT), I've identified opportunities and developed business-critical applications, building multiple solutions from scratch, which decreased headcount, improved operations cost-effectiveness and customer satisfaction about the services provided, to the point where I could justify hiring other people to help with the increasing demand for new software and features.

I went from writing scripts for simple task automation, to building full fledged, modular, scalable and testable applications over a short period of time, dealing with the full software development life cycle and all the people involved in it, while following some agile principles. Finding out and learning the required tools in order to solve each new challenge was something fully accomplished with self-study.

Main developed applications were highly configurable through web interfaces to meet users' needs, and revolved around data extraction, processing and delivery, from multiple sources/systems through a variety of different approaches, such as REST API calls, web scraping and GUI automation.

Backend development of multi-threaded/asynchronous, microservice-oriented applications, including distributed processing. CI/CD pipelines management using unit tests (pytest), test coverage and GitHub. Development of API endpoints with Django and FastAPI. Usage of docker for cloud deployment (AWS/Azure).

Technologies: Python, FastAPI, Django, Asyncio, aiohttp, Pandas, Scrapy, Selenium, Appium, MySQL, SQLAlchemy, MongoDB, RabbitMQ

Linux Systems Analyst at Mutant - May/2016 to May/2017

• Linux (RedHat, CentOS, Ubuntu):

Responsible for the restructuring and administration of existing systems, as well as development and deployment of new solutions in mixed environments, resulting in effective cost reduction and increased productivity, quality and assertiveness of tasks and services.

Deployment and administration of:

- Linux SFTP with AD/Kerberos integrated authentication, having Windows file servers as repository;
- Reverse proxy HAProxy in high availability through Keepalived;
- Samba, NFS and CIFS shares;

- Apache as webserver and reverse proxy in high availability through Corosync/Pacemaker;
- Agile infrastructure deployment and configuration (SaltStack);
- Company's SSL certificates management through IIS and openssl;
- 'Homer SIP Capture' tool, for VoIP analysis and troubleshooting;

• Network:

- Deployment of highly available, open source services: firewall cluster (pfsync, CARP); LAN/WAN links load balance; IPSec peers failover, OpenVPN with link redundancy for home office users;
- Squid proxy configuration with SSL interception in transparent, as well as explicit mode with AD integrated authentication, aside from configuring DNS, Routes, NATs, ACLs, DHCP, DynDNS;
- Administration and troubleshooting in a complex environment regarding VPN, MPLS, Lan2Lan, GRE.
- Firewall, router and switch (Cisco) configuration for multiple networks' interconnection and security;
