Objective

Senior Data Engineer focused on Azure and AI-ready data platforms, building scalable, governed, and production-grade pipelines for analytics, compliance, and machine learning use cases.

Professional Summary

Data Engineer with 8+ years of experience building scalable data platforms across banking, healthcare, fintech, energy, and CPG, including work in international projects and enterprise environments. Strong expertise in Azure, Azure Data Factory, Azure Databricks, PySpark, SQL, Snowflake, and data governance, delivering batch and near real-time pipelines for analytics, compliance, and AI-ready use cases.

Experienced in designing hybrid-cloud architectures, integrating APIs, implementing medallion architecture, and building curated, business-ready datasets that support reporting, advanced analytics, and machine learning workflows. Proven track record of improving data quality, automating large-scale pipelines, and structuring enterprise data foundations for global teams.

Professional Experience

ExxonMobil (US) – Senior Data Engineer
US energy company
01/2026 – Present

- Leading Azure and AI data engineering initiatives as the primary data engineer responsible for platform design, architecture decisions, and delivery.
- Designing and structuring scalable data architectures using Azure Databricks, Azure-based workflows, Snowflake, and API integrations.
- Implementing medallion architecture to organize raw, refined, and curated data layers for analytics and downstream consumption.
- Migrating legacy data from ExxonMobil and acquired companies into a new structured API ecosystem, organizing datasets by endpoints according to business rules and domain logic.
- Preparing and publishing clean, governed datasets back to APIs and analytical layers, improving data accessibility, consistency, and reuse across enterprise processes.
- Designed governed enterprise consumption layers in Snowflake, structuring curated and business-ready data products for downstream analytics and API-based access.
- Contributed to enterprise data architecture decisions involving lineage, metadata consistency, semantic organization by business domains, and scalable governed consumption patterns.
- Built AI-ready data products that supported downstream analytics and structured enterprise consumption across business and technical teams.

Key Results:

- Improved structure and standardization of legacy and acquired-company data for modern API-based consumption.
- Helped define scalable architecture patterns across Azure, Azure Databricks, and Snowflake workflows.
- Strengthened clean-data delivery for AI-ready and business-facing enterprise use cases.

Act Digital – Data Specialist
Brazilian IT consulting company

09/2024 – 01/2026
Delivered enterprise data engineering projects for banking and consumer goods clients, with a focus on Azure, Azure Databricks, scalable pipelines, and AI-ready data platforms.

Inter Bank – Data Specialist
Brazilian digital bank
02/2025 – 01/2026
Client project via Act Digital

- Built hybrid cloud data platforms with an Azure-first approach and selective AWS integration, supporting fraud detection, regulatory reporting, and AI-ready data use cases.
- Designed curated gold datasets and feature-ready data layers for analytics and machine learning workflows.
- Implemented data-quality gates and performance optimizations across large-scale banking pipelines.
- Contributed to hiring processes for the data area, supporting candidate evaluation and helping strengthen team growth.
- Designed curated consumption layers and governed gold datasets for fraud detection, regulatory reporting, and enterprise analytics workflows.
- Strengthened data quality, governance, and lineage visibility across banking pipelines to support reliable downstream consumption.

Key Results:
- Reduced regulatory report latency from 4h to under 30min.
- Improved data quality and pipeline reliability through automated validation controls.
- Delivered curated datasets supporting fraud detection and ML-oriented workflows.

AB InBev – Data Specialist
Global beverage company
09/2024 – 02/2025
Client project via Act Digital

- Worked in an international team designing and developing scalable Azure-based data solutions for large-volume consumer analytics use cases.
- Integrated multiple data sources and APIs, ensuring continuous data updates and reliable ingestion for fast, accurate analysis.
- Built robust pipelines with Azure Data Factory, Azure Databricks, and PySpark to process and transform high-volume survey data at scale.
- Applied advanced data-cleaning, standardization, and transformation logic to handle country-specific formats, data types, and business rules.
- Developed a specialized pipeline for consumer sentiment and pricing-sensitivity analysis, generating refined datasets for marketing and pricing teams.
- Designed refined and governed consumption datasets in Snowflake to support enterprise analytics, pricing insights, and scalable business reporting.
- Applied business-rule-driven data modeling and semantic organization to improve enterprise consumption across regional analytics use cases.
- Improved data consistency, scalability, and delivery speed by structuring reliable processing layers for downstream analytics and business consumption.

Key Results:
- Standardized more than 20M consumer responses per month into refined datasets for analytics and pricing models.
- Enabled faster regional pricing decisions through governed, business-ready data delivery.
- Strengthened large-scale analytics workflows across Azure Databricks and Azure-based data platforms.

Workiva (US) – Data Engineering Advisor
US SaaS company
09/2025 – 02/2026
Part-time advisory engagement

- Supported discussions on Azure-based workflows and AI-ready data architecture for enterprise use cases.
- Contributed to technical decisions around scalable data processing, governance, and data quality.
- Helped align business requirements with structured enterprise data processes.

Chargeblast (US) – Data Engineer
US fintech company
04/2023 – 09/2024

- Designed scalable data pipelines for financial operations, real-time alert processing, and AI-driven analytics use cases.
- Built feature-ready datasets in Python and PySpark for risk-scoring, churn analysis, and ML-supporting workflows.
- Automated ETL workflows with AWS Glue, Lambda, Airbyte, and Redshift, improving data freshness and operational visibility.
- Developed Power BI dashboards integrating transactional and ML-oriented outputs for anomaly detection and business monitoring.

Key Results:

- Designed scalable data pipelines for financial operations, real-time alert processing, and AI-driven analytics use cases.
- Built feature-ready datasets in Python and PySpark for risk-scoring, churn analysis, and ML-supporting workflows.
- Automated ETL workflows with AWS Glue, Lambda, Airbyte, and Redshift, improving data freshness and operational visibility.
- Developed Power BI dashboards integrating transactional and ML-oriented outputs for anomaly detection and business monitoring.

Wings – Data Engineer
Brazilian healthcare company
03/2020 – 04/2023

- Led the design and implementation of the company's data platform, establishing scalable reporting, governance, and compliance workflows.
- Led the modernization of the company's data platform, establishing governed data foundations, standardized business rules, and scalable consumption layers for enterprise reporting and compliance.
- Built and maintained end-to-end data pipelines using Python and SQL, consolidating large healthcare datasets for operational and regulatory use cases.
- Modernized the environment by introducing Azure and Azure Databricks, enabling scalable processing and governed ETL workflows.
- Structured ingestion, transformation, validation, and data-quality processes to improve reliability and business usability.
- Optimized queries, refactored pipelines, and strengthened the overall data architecture to support business growth.

Key Results:

- Built the company's data foundation from scratch, enabling scalable analytics, governance, and compliance workflows.
- Delivered a large-scale healthcare data initiative that improved decision-making and supported regulatory requirements.
- Generated strategic insights that supported a pivot toward hospital services, contributing to 68% annual growth.
- Strengthened data governance, quality, and audit readiness across the environment.

Ophir – Data Analyst
UAE marketing and events company
01/2018 – 03/2020

- Applied predictive and analytical approaches to sponsorship engagement and performance tracking.
- Worked extensively with SQL, relational databases, and Power BI to structure reports and generate business insights.
- Modeled financial and operational data to support decision-making and event planning.
- Planned and executed high-value events supported by data-driven analysis.

Key Results:

- Increased brand exclusivity and sponsor retention via data-driven targeting.
- Optimized campaign outcomes by combining predictive modeling and engagement data.
- Integrated charity auction participation analytics, increasing contributions and outcomes.

Previous Experience
SSWhite Duplex – Marketing Manager
Brazilian healthcare company
04/2009 – 01/2019

- Conducted market analysis to identify emerging trends and support data-driven marketing decisions.
- Analyzed product performance, sales volume, and margin to guide portfolio and go-to-market strategies.
- Built strong business and domain knowledge in the healthcare sector.

Core Technical Skills

Cloud & Data Platforms: Azure, Azure Data Factory, Azure Databricks, Snowflake, Delta Lake, AWS
Programming & Data Processing: Python, PySpark, SQL, REST API Integration
Data Architecture & Engineering: Medallion Architecture, ETL/ELT, Data Modeling, Data Governance, Data Lineage, Data Quality Frameworks
AI-Ready Data Engineering: Feature-ready datasets, ML-supporting pipelines, Azure ML, Scikit-learn, TensorFlow, Hugging Face, LLM Integrations
Orchestration & Delivery: CI/CD, GitHub Actions, Terraform, Airflow, Workflow Automation
Visualization & Analytics: Power BI, Tableau, Superset

Education

- Bachelor's Degree: Computer Science – Centro Universitário Cesuca
- Specialization: Cloud Specialization Program – The Cloud Bootcamp
- Master's Degree (in progress): Data Engineering & Artificial Intelligence – Anhanguera

---

Courses and Certifications

- Databricks Lakehouse Fundamentals – Databricks
- Microsoft Azure Data Engineer Associate (DP-203)
- Microsoft Azure Data Fundamentals (DP-900)

- Cloud Specialization – The Cloud Bootcamp
- Python

Languages

- Portuguese (Native)
- English (Fluent)
- Spanish (Intermediate)
- Japanese (Basic)
